

Step 01:

Search for git in google and browse <https://git-scm.com/downloads>

The screenshot shows the Git website's Downloads page. The header features the Git logo and the tagline "--local-branching-on-the-cheap". A search bar is located in the top right. The left sidebar contains links for "About", "Documentation", "Downloads" (highlighted in red), "GUI Clients", "Logos", and "Community". Below the sidebar, a text box mentions the "Pro Git book". The main content area is titled "Downloads" and features three platform buttons: "macOS", "Windows" (highlighted with a red box), and "Linux/Unix". To the right, a monitor graphic displays the "Latest source Release 2.44.0" and a "Download for Windows" button. Below the platform buttons, text states that older releases are available and the source repository is on GitHub. Further down, there are sections for "GUI Clients" and "Logos", each with a "View" link.

Step 02: Download git for your OS

The screenshot shows the "Download for Windows" page on the Git website. The header and sidebar are identical to the previous screenshot. The main content area is titled "Download for Windows" and provides instructions for downloading the latest 64-bit version (2.44.0). It includes a link to download the "32-bit Git for Windows Setup" and a link to download the "64-bit Git for Windows Setup" (highlighted with a red box). Below these, there are links for "Portable ('thumbdrive edition') 32-bit Git for Windows Portable" and "64-bit Git for Windows Portable". The page also includes a section for "Using winget tool" with a command to install Git. At the bottom, it mentions the current source code release is version 2.44.0 and provides a link to the source code.

Step 03: Install git as regular application

Information

Please read the following important information before continuing.

When you are ready to continue with Setup, click Next.

Step 03: Install git as regular application

Completing the Git Setup Wizard

Setup has finished installing Git on your computer. The application may be launched by selecting the installed shortcuts.

Click Finish to exit Setup.

- ☒ Launch Git Bash
- ☒ View Release Notes

Finish

Step 04: Launch git bash & write your first command `git -v`

```
rabbil@ICONS-01 MINGW64 ~  
$ git -v  
git version 2.44.0.windows.1
```

```
